USING COMPOST

Compost is often used to improve garden soils, or mixed with topsoil to establish a proper base for a new lawn.

It can also be mixed with other products to create an excellent potting soil. For best results, compost should be mixed in with native soils. Some plants are very sensitive, and may react adversely to being planted in pure compost. When in doubt, consult our staff.

As you may know, the price of bark is tied to the price of wood products that are sold as fuel for industrial boilers. As a result, bark prices have risen steadily over the years.

As the demand for waste wood increases, it can cause severe shortages in the material available to be ground into landscape bark.

Compost is an excellent choice as a ground cover. It adds nutrients to the soil, helps maintain water content so you don't have to use as much water, and it keeps its dark, rich color as it ages, so it looks great!

Our compost has been listed and approved for use in the production of organic products by the Organic Materials Review Institute.

CUSTOM BLENDS

Don't see what you want on the list? Ask us about our custom-blending service. For a small mixing fee, we can combine any of our products to make the blend that's right for you!

Red Cinder, 2-6" rock, Pumice	\$6.00	\$24.00
Most other products*	\$3.00	\$15.00

*NOTE: Some products not available by bucket/can.

HOW MUCH TO BUY

Our staff can help estimate how much product you need. Here's a basic guide of yardage needed **to cover 2" deep:**

150 sq. ft. = 1 yd³ 300 sq. ft. = 2 yds³
450 sq. ft. = 3 yds³ 1100 sq. ft. = 1 unit

- Step 1 - measure the length and width of each bed (in feet)
- Step 2 - multiply the length x width x depth (convert to feet)
- Step 3 - add the totals together, then divide by 27, this converts the total volume into cubic yards.

No Refunds or Exchanges!
NOTE: Due to extreme volatility in market, prices, color & texture are subject to change!
