

organic waste recycling

Why is organic waste recycling important? Because organic wastes, like food scraps, generate methane, a powerful greenhouse gas, when decomposing in landfills. But in Placer County, we've got organic waste recycling covered without the need for an extra bin at your curb!

Now that upgrades to the WPWMA Materials Recovery Facility (MRF) are done, we're capturing more recyclables than ever, even food scraps! Learn how organic wastes are recovered and recycled at PlacerRecycles.com.

You can also find easy tips to prevent food waste or book a tour of the MRF at PlacerRecycles.com!

PLACERRECYCLES

more *of*

and more *than*

Congratulations! As a resident with trash collection service in Placer County, you're part of One Big Bin! There's no competition - with One Big Bin and the WPWMA MRF, we're miles ahead!

Need a refresher?

- Toss trash and recyclables together into your garbage bin.
- From your curb its taken to the WPWMA Materials Recovery Facility (MRF) where everything is sorted and recyclables are recovered, even food waste!
- Compared to multi-cart systems, our program recovers more of traditionally recycled items, and more than those items, all with less collection trucks on the road!

Visit PlacerRecycles.com to find out how we achieve "*more of and more than*"!
